Study Title: Transfer of Category Biases in Natural Scenes

Investigator: Dr. Gaeun Son, Department of Psychology

The purpose of this study is to investigate whether perceptual biases formed through category learning go beyond simple judgment strategies and instead structurally distort perceptual space itself, and whether such distortions are not limited to the specific stimulus context in which category learning occurred but can transfer to other contexts along a third attribute dimension that shares similar perceptual properties.

Before agreeing to participate in this research study, please read the following carefully to understand the procedures, potential risks, and benefits of the study. Your participation is voluntary and you may discontinue participation at any time without penalty.

Research Participants: A total of 30 to 150 adults aged 19 years or older will participate in this study. Individuals who are colorblind or have color vision deficiencies, or who do not have normal or corrected-to-normal vision, will be excluded from participation.

Procedures. You will first be asked to provide information about yourself (age, race, sex assigned at birth, normal or corrected-to-normal vision), and then asked to complete following tasks:

- Learn categories of everyday scene images in which two scene attributes vary.
- After viewing everyday scene photographs, select from the next screen the photograph that you remember as being most similar.
- After viewing a different set of everyday scene photographs, select from the next screen the photograph that you remember as being most similar.
- Choose the category of the scene photographs shown in the immediately preceding task.

Duration. This study consists of one experiment that requires 60 – 120 min.

Risks. Participation may experience mild eye strain while performing the task.

Compensation. Upon satisfactory completion of the study, you will receive the amount listed either in the HIT directory (Amazon Mechanical Turk, MTurk) or in the study directory (Prolific), via the payment system provided by Amazon or Prolific, respectively.

Benefits. There are no personal benefits to participation in this study.

Confidentiality. The data collected in this study include sex, age, ethnicity, normal or corrected-to-normal vision, and keyboard and mouse response inputs. These data are linked to either Worker ID (MTurk) or Prolific ID (Prolific). Both types of ID are an arbitrary string of alphanumeric characters that is not linked to any personal information.

Questions or Concerns. You can ask questions about this study now or at any time during the study by e-mailing Gaeun Son at songaeun@sungshin.ac.kr

If you have questions about your rights as a research participant or feel that you have not been treated fairly, please contact the Institutional Review Board of Sungshin Women's University at irb@sungshin.ac.kr or at **+82 2-920-7760**

By clicking on the "Accept" button, you indicate that you agree to participate in the study and that you understand the information in this consent form. You agree that you are at least 18 years of age. You have not waived any legal rights you otherwise would have as a participant in a research study.
